

21 October 2026

To Whom It May Concern

This letter confirms that Waste Plan provides waste management services to the V&A Waterfront. The existing V&A Waterfront Solid Waste Facility has sufficient capacity to accommodate the projected solid waste generated by the Granger Bay precinct.

During the construction of the new waste-to-energy plant (scheduled for 2026-2028), the facility will be closed. Waste Plan will collect, sort, and process all waste generated within the Waterfront, including Granger Bay, during this period.

The V&A Waterfront and Waste Plan will continue to manage all solid waste processing for the precinct, and no City waste collection support will be required.

Sincerely

Julian Kruger
